Erratum to “A dynamic model to predict fat and protein fluxes and dry matter intake associated with body reserve changes in cattle” (J. Dairy Sci. 96:2448–2463)

Luis O. Tedeschi, Danny G. Fox, and Paul J. Kononoff

An incorrect version of Figure 1 (page 2450) was included in the paper. The correct version is shown below.

The authors regret the error.

REFERENCES

Tedeschi, L. O., D. G. Fox, and P. J. Kononoff. 2013. A dynamic model to predict fat and protein fluxes and dry matter intake associated with body reserve changes in cattle. J. Dairy Sci. 96(4):2448–2463.

Figure 1. Conceptual representation of long- and short-term feed-back loops affecting the dynamics of DMI in a ruminant animal. Self-reinforcing and self-correcting loops are represented by positive and negative signs within the semicircle arrow, respectively. Positive and negative signs near the arrowheads indicate that the effect is positively or negatively related to the cause.
