Erratum to “Perceptions and risk factors for lameness on organic and small conventional dairy farms” (J. Dairy Sci. 96:5018–5026)

R. M. Richert, K. M. Cicconi, M. J. Gamroth, Y. H. Schukken, K. E. Stiglbauer, and P. L. Ruegg

In the first paragraph of the Introduction (page 5018), the authors state “Management factors that have been associated with the prevalence of lameness include . . . feeding a grazing-based diet (Haskell et al., 2006).” The authors note that “feeding a grazing-based diet” could be better expressed as “access to pasture.”

In the Discussion section (page 5023), the authors state “Cows in larger herds . . . , such as improved housing, use of automatic manure removal, and . . .” This

should state [corrected text in bold] “. . . **lack of automatic manure removal**, and . . .”

The authors regret the error.
