Corrigendum to “Effects of acetic acid or sodium acetate infused into the rumen or abomasum on feeding behavior and metabolic response of cows in the postpartum period” (J. Dairy Sci. 101:2016–2026)

L. B. Gualdrón-Duarte and M. S. Allen

On page 2022, the eighth sentence of the second paragraph should be modified as follows (changes in bold): “Similarly, infusion of AcA at 1.5 mol/h into the rumens of mid-lactation cows stopped rumination and **likely** induced metabolic **acidosis** within 8 h but had no adverse effects when AcA was partially neutralized (Sheperd and Combs, 1998).”

The authors regret the error.
