Journal of Dairy Science Honors Most Prolific Authors

As part of the centennial celebration for the Journal of Dairy Science, individuals who have authored or coauthored 100 or more papers in the journal will be inaugurated into JDS Club 100 at the 2017 American Dairy Science Association® Annual Meeting in Pittsburgh, Pennsylvania. This first class of authors will receive a memento to honor their unique standing among all JDS authors, and annually thereafter, new members will be added as researchers achieve this milestone. The inaugural group of authors will be notified shortly.

According to JDS editor-in-chief Matt Lucy, “This award is really a way to recognize those who have made truly significant contributions to the journal. Publishing 100 papers is a great accomplishment, and those who have done so solely within JDS certainly deserve commendation.”

In the first issue of JDS, published in May 1917, J. H. Frandsen, the journal’s first editor-in-chief, christened the fledgling publication by declaring it to be a “medium for the discussion of general and technical problems relating to the science of dairying, which confront the worker in every field of this important industry.” Early issues of the journal had many committee reports and abstracts from conference proceedings, but also included important studies that helped further dairy science.

The range of topics covered in JDS has expanded widely, surely beyond what Frandsen might have predicted in 1917, as the field has evolved. Today, JDS serves readers with interests in biochemistry, breeding, economics, engineering, environment, food science, genetics, microbiology, nutrition, pathology, physiology, processing, public health, quality assurance, and sanitation.
